

### **automorphic forms and number pdf**

In harmonic analysis and number theory, an automorphic form is a well-behaved function from a topological group  $G$  to the complex numbers (or complex vector space) which is invariant under the action of a discrete subgroup  $\Gamma$ , of the topological group.

In mathematics, the Langlands program is a web of far-reaching and influential conjectures about connections between number theory and geometry. Proposed by Robert Langlands (1967, 1970), it seeks to relate Galois groups in algebraic number theory to automorphic forms and representation theory of algebraic groups over local fields and adèles.

Last updated: Feb 8, 2018. projects in homotopy theory (completed ones are at the bottom) I've arranged the projects roughly in the order of my interest (except for the ones at the bottom of this big header (for homotopy theory projects), which I've already completed).
