The core idea behind the hierarchical model is illustrated in Figure 8.1. Figure 8.1a depicts Figure 8.1a depicts the type of probabilistic model that we have spent most of our time with thus far: a model

Hierarchical Bayesian Models Hierarchical Regression and Spatial models . What is a hierarchical model? Hierarchical models are used when the data are structured in groups. e.g. demographically, temporally, spatially Different (but related) parameters are used for each group These group level parameters are can be interpreted to describe group level differences for predictors we DIDNâ€™T ...

13CHAPTER Bayesian Estimation in Hierarchical Models John K. Kruschke and Wolf Vanpaemel Abstract Bayesian data analysis involves describing data by meaningful mathematical models, and allocating credibility to parameter values that are consistent with the data and with prior knowledge. The Bayesian approach is ideally suited for constructing hierarchical models,

(PDF) Bayesian Estimation in Hierarchical Models
Bayesian hierarchical models are an extremely useful and ï¬,exible framework in which to model complex relationships and dependencies in data. In the hierarchy we consider, there are three levels; (1)The observation, or measurement, level (2)The underlying process level (3)The parameter level.

The paper is organised as follows: in Section 2 we describe hierarchical Bayesian models and the parallelisation strategy adopted in MultiBUGS; implementation details are provided in Section 3; Section 4 provides a step-by-step guide to tting models in
